

# QA CHALLENGE - Inventive AI

## **Description**

The goal of this challenge is to write a test plan containing the scenarios that will be automated for [Inventive.ai](#) product.

---

## **Pre conditions**

- The user must have valid credentials to be able to login in inventive AI, for testing:email: [qainterview@inventive.ai](mailto:qainterview@inventive.ai)  
password: ]1r3v)oLUKW\$0&~s
  - Tests must be conducted in staging environment, url: <https://staging.inventive.ai> ;
- 

## **Expected results**

### Scenario 01 - Validate that is possible to login into the application.

Given the user access Inventive AI application  
When the user type valid Email username in “Login” page  
And the user click “Continue” button in “Login” page  
And the user type a valid password in “Login” page

When the user click “To enter” button at “Login” page  
Then the user must be logged in and redirected to the “Projects” home page

### Scenario 02 - Validate that is possible to navigate to “New project” page.

Given the user access Inventive AI application  
When the user type valid Email username in “Login” page  
And the user click “Continue” button in “Login” page  
And the user type a valid password in “Login” page  
  
When the user click “To enter” button at “Login” page  
Then the user must be logged in and redirected to the “Projects” home page

When the user click “New Project” button in “Projects” home page  
Then the user must be redirected to the “New project” page

### Scenario 03 - Validate that is possible to Create New project and validate its creation.

Given the user access Inventive AI application

When the user type valid Email username in “Login” page

And the user click “Continue” button in “Login” page

And the user type a valid password in “Login” page

When the user click “To enter” button at “Login” page

Then the user must be logged in and redirected to the “Projects” home page

When the user click “New Project” button in “Projects” home page

Then the user must be redirected to the “New project” page

When the user type and fill required fields in “Project Details” container in “New project” page

And the user click “Continue” button in “New Project” page

Then the user must be redirected to the “New Project ”> “Team members” page

And the user click “Continue” button in “New Project” page

Then the user must be redirected to the “New Project ”> “Upload Documents” page

When the user click “Browse” button in “New Project ”> “Upload Documents” page

And the user upload an archive in format required in “New Project ”> “Upload Documents” page

And the user click “Continue” button in “New Project” page

Then the user must be redirected to the “Project overview” page

And the user can validate that the Project is created containing the submitted details
